Leaders in Antibiotic Susceptibility Testing Since 1959

For over 6 decades, Mast has been driving innovation in antimicrobial susceptibility, combination, and identification disc technology. Our ever-growing portfolio delivers one of the most comprehensive ranges available worldwide, trusted globally by laboratories and healthcare professionals.

Through our **mastpharma®** development and **mastpharma®** stability services, we partner with and support the pharmaceutical industry in evaluating novel antimicrobial compounds.

Disc diffusion remains the leading method for determining bacterial antibiotic susceptibility in infectious disease management. Its reliability and global acceptance are reinforced by internationally standardised guidelines from the European Committee on Antimicrobial Susceptibility Testing (EUCAST) and the Clinical and Laboratory Standards Institute (CLSI).

MASTDISCS® are available in a wide range of test discs, presented in dispensing cartridges or vials, in accordance with quality assurance protocols aligned with International standards.
